

## EcoQuest - Healthy Living Technologies

North American families spend more than 90% of their time indoors. The dust and chemicals in the carpet are the equivalent of toxic waste. The water at the kitchen sink we thought was safe is polluted with contaminants that are putting our health at risk.

Experts say that between 2 and 10 million dust mites live in your mattress, and another 2 million live in your pillow.

At EcoQuest, issues like these are important to us because they are important to you and your family. Our mission is to enhance and advance the quality, safety, convenience, and health of the spaces where people spend their lives.

When it comes to getting rid of stinky odors in the refrigerator, you've really only got two choices:

Buy a new fridge

- OR -

Install a Refresh!

- PLUS -

Refresh keeps food fresher, longer, by killing bacteria, yeast, and mold on the surfaces in the fridge.

*Refresh puts  
 "Certified Space"  
 technology in your  
 refrigerator, safely  
 reducing odors,  
 bacteria, yeast, and  
 mold - without  
 the need to change  
 filters, replace  
 boxes of powder, or  
 change batteries.*

## Reduce Odors and Kill Germs Like eColi

About the size of a box of baking soda and virtually maintenance-free, Refresh knocks out odors and kills germs 24/7, for nearly two years.

No boxes to change, nothing to spill, no mess, no batteries, no filters; just a simple, attractive unit with a flat cord that slips under the door.

Refresh uses ActivePure technology to continuously help protect your family's food by reducing odors with the power of oxygen. ActivePure reduces the bacteria and mold that can cause food to spoil.

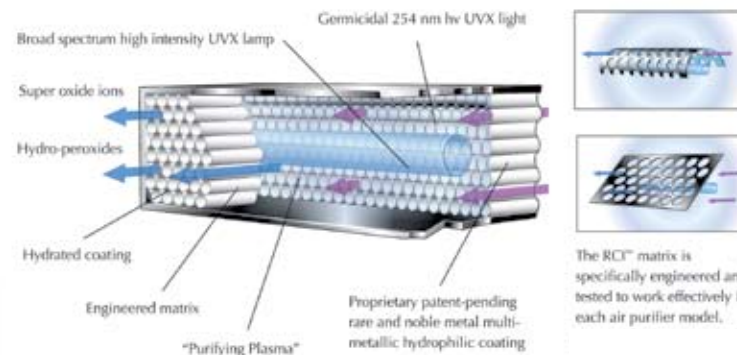

## How does it work?

### ActivePure Uses Science To Duplicate Nature

In short, ActivePure (RCI) is technology based on how nature keeps things safe and clean outdoors. ActivePure is based on NASA research into prolonging the life of plants in space.

The natural processes found in thunderstorms, sunlight, and lightning produce natural oxidizers that keep the environment fresh outside.

ActivePure duplicates nature to safely reduce odors in the air, and mold and germs on the surfaces in the fridge. This helps prolong the life of produce and other foods, while reducing exposure to illness-causing germs.

The RCI™ matrix is specifically engineered and tested to work effectively in each air purifier model.

Independent, University testing has proven the use of EcoQuest's ActivePure technology to substantially reduce microbial populations on surfaces. Field results may vary based on environmental conditions. These results have not been evaluated by the FDA.

## Refresh Kills Germs!

Germs like eColi and staph lurk in your fridge and can cause food poisoning. Now you reduce your exposure to these nasty germs, naturally, with Refresh and the power of ActivePure!

## Proven Results!

Independent tests at Kansas State University prove ActivePure (RCI) dramatically reduces microbiologicals on surfaces in 24-hr testing:

- Staph (Staphylococcus aureus) . . . . .98.5%
- MRSA - Methicillin Resistant Staph 99.8%  
(Methicillin Resistant Staphylococcus aureus)
- eColi (Escherichia coli) . . . . .98.1%
- Bacillus spp. . . . . 99.38%
- Streptococcus spp. . . . . 96.4%
- Pseudomonas aeruginosa . . . . .99.0%
- Listeria monocytogenes . . . . .99.75%
- Candida albicans . . . . .99.92%
- Stachybotrys chartarum . . . . .99.93%

## Refresh Really Works!

Refresh! includes a 120 volt flat cord AC adapter
