

## Living Water All-In-One Showerhead

Half of our daily chlorine exposure is from showering. As chlorine is absorbed through the skin, it also vaporises in the shower, is inhaled into the lungs, and transfers directly into the blood stream. In fact, exposure in one shower is equal to drinking an entire day's amount of the same water. The Living Water All-In-One Showerhead will remove chlorine and other chemical toxins from your water. You'll notice the results – shiny, smooth hair, and soft, healthier-feeling skin. Plus, because it makes water “wetter” by lowering its surface tension, beauty products work better. And with filtered water, you'll use less shampoo and soap. Start enjoying invigorating showers, healthier skin and hair, and peace of mind by installing a Living Water All-In-One Showerhead.
